

THE CONSORTIUM FOR
MATHEMATICS AND
ITS APPLICATIONS

August 27, 2024

COMAP – The Consortium for Mathematics and its Applications is excited to work in collaboration with [Ellison Scholars](#), which is part of the **Ellison Institute of Technology (EIT)**. The institute’s mission, in partnership with the University of Oxford, is to help solve some of humanity’s most challenging and important problems. In particular, EIT focuses on four ‘humane endeavors’: health and medical science, food security and sustainable agriculture, climate change and clean energy, and government innovation and the era of artificial intelligence. The alignment of EIT’s mission with COMAP’s mission and our mathematical modeling contests is easy to see. At the heart of humanity’s most challenging problems is the need for innovative mathematical models of the phenomena and systems being studied.

Ellison Scholars are looking to identify students who might make excellent scholarship candidates. Every year the Ellison Scholars programme seeks at least 20 students who will receive fully funded scholarships to the University of Oxford and a generous stipend to work shoulder-to-shoulder with EIT’s experts on projects that will accelerate innovation for global benefit. These scholarships are available to both undergraduate and graduate students. In recognition of the excellent work submitted to the **HiMCM**, **MCM/ICM**, and **IM²C** contests, students from contest teams who earn an Outstanding designation will be invited to exclusive webinars and potential interviews with the Ellison Scholars team.

The Ellison Scholars programme is seeking students who want to innovate across maths, technology, science or engineering. Working on mathematical modeling problems has always been about solving important problems facing the world, and now your mathematical modeling experiences can help secure your education as an Ellison Scholar.

For the October 2025 intake, graduate applications will close at the end of September 2024. There is also an Ellison Scholars programme for undergraduate candidates, and the next application window for the October 2026 intake will open next year.

To stay in touch with the Ellison Scholars team, please sign up to their newsletter.
